

MEPCOM-ORIENT-BLUESTREAM PTE LTD

20, Sin Ming Lane, #07-65, Singapore 573968

Date: 9th December 2019

Our Ref: MOB-TSL-EOI-19-001

To: **Chairman
Urban Development Authority**

Attention: **Dr. Priyath Bandu Wickrama**

Subject: **Proposal for the provision of electric passenger busses for the Colombo City and Airport**

Dear Sir

We refer to the discussion our Sri Lanka based partners Suneth Wijesinghe of Malco Engineering Pvt Limited had with you recently and wish to follow up with this Expression of Interest letter for your kind consideration.

Malco Engineering Pvt Limited and our consortium of partners in Singapore MEPCOM-ORIENT-BLUESTREAM PTE LTD wish to establish this business in Sri Lanka with one of our Chinese partner CCCG who will lead the project financing.

We are preparing a project report for discussion and development with the eventual aim of designing and assembling electric passenger transport busses to suit the requirements of the Sri Lanka Transport Board (SLTB)

We have existing design and manufacturing capabilities in China and Malaysia and we intend to propose the development of a technology transfer model to cater for the manufacture of electric passenger busses in Sri Lanka to serve the local market. It is envisioned that this could potentially be achieved through setting up a Private-Public Partnership with your esteemed SLTB.

In addition to the design and manufacture of the busses we are able to review and assess and eventually organise funding to develop the project and develop the required infrastructure to provide operational support including vehicle servicing and electric charging stations should a mutually agreeable model for cooperation be decided upon.

We are able to immediately begin planning for a pilot project with 100 city busses to operate under the **Airport and Aviation** to transport passengers between the Colombo and Jaffna airport and major cities in the 60KM radius.

A full project evaluation can be carried out by our team to determine the cost benefit analysis of developing a domestic solution for electric passenger busses including evaluation of factors such as the positive environmental and social impacts of switching from traditional diesel vehicles to greener electric powered vehicles.

We plan to visit you and discuss this in person and require a tentative meeting date to make a presentation to the ministry at your earliest convenience.

Thanking you

Yours faithfully

MOB Group
